## BALTIC CONTROL®

Baltic Control®, is a leading global inspection, verification, testing and certification company. We are internationally recognized and operate through a network of offices and trusted representatives across all geographical regions of the world.

## HISTORY

The company was established at the port of Aarhus, Denmark, in 1980 with the view of offering inspection services in the agricultural sector especially shipments of grains and feedstuff to the former Soviet Union and the DDR where large quantities were shipped from Scandinavian ports on feeder vessels over the Baltic Sea - hence the name Baltic Control®. The company quickly expanded to other regions and activities to what is it to day; a truly global and recognized company.

## MISSION

We strive to offer to our customers a truly independent service wherever it may be required, with emphasis on quick response, attention to detail and competent execution adding value to customer needs and maintaining a growing and long lasting business relationship.

## VISION

We aim to maintain an internationally recognized brand offering a competitive, competent and global service within inspection, certification, testing and fumigation by constantly improving and supporting our global network. We endeavour to adapt our services to match market changes and current business reality.

# Caring about quality

## INSPECTION

We are offering a complete range of inspection, verification, superintendence, survey, monitoring and advisory services in a broad range of areas to our clients world-wide. Since the beginning of the company in 1980 in Denmark, we have diversified our services from mainly agricultural products into many sectors and we are today dealing with virtually all kinds of goods, commodities, machinery and equipment thinkable.

Thanks to our global coverage and local insight, we are able to control, test and communicate information and results on almost all types of products in accordance with both local regulations and international standards.

Our inspection certificates are recognized by state procurement agencies, international organizations, underwriters, banks, merchants, traders, ship owners, government organizations and NGOs throughout the world. We put emphasis on keeping our customers well informed throughout the operations and on completion facilitate correct and detailed inspection certificates without delay.

The Baltic Control® organisation operates 24 hours a day, 7 days a week around the world. The diversity of the Baltic Control® Group ensures that we always have access to experts and industry knowledge on any given problem somewhere in our organisation.

We are members of the International Federation of Inspection Agencies (IFIA) and according to our code of ethics and IFIA compliance code we strive to offer a truly transparent, neutral and objective service to the benefit of our customers.

## CERTIFICATION

Quality, management and systems certification are today globally integrated and provide the most effective documentation that any given company conducts its work in a serious and trustworthy manner according to specified conditions. Also, with a well implemented quality or systems management programme companies and their staff will be benefiting from streamlined and structured working conditions.

As an accredited certification body, Baltic Control® offers certification services of quality management systems according to local and international standards. Our customers can choose either to become certified as per official standards or to develop their own quality system and then have it audited by us.

A high level of service, ethics and very experienced and qualified staff are the key words in the way we conduct our work.

## TESTING

Through our global network, Baltic Control® is able to organise reliable analytical tests of products and biological substances wherever it may be required. We are committed to provide the highest quality of services and accurate results in time.

We are working only with our own or other internationally recognised laboratories where we are confident of the reliability and accuracy of the data ascertained.

## FUMIGATION

Every year world food production suffers substantial losses due to pests during post-harvest storage and commodity transport. Therefore, an effective and reliable pest control program is needed to control and reduce damage inflicted by insect and rodent pests during trade, logistics and warehousing of agricultural commodities, food and feed production and processing.

Baltic Control® fumigation operations comply with stringent local and international legislation as well as international quality and safety standards.

### QUALITY MANAGEMENT

Baltic Control® is ISO 9001 certified and a member and represented on the board of International Federation of Inspection Companies (IFIA) and we have adopted their code of ethics and compliance code throughout our global network.

### MEMBERSHIPS

We are members of and approved by several trade associations associated to our main areas of business. Please visit our website [www.balticcontrol.com](http://www.balticcontrol.com) for further information. This is an important part of our trade as we are working normally according to rules laid down by these bodies. Furthermore, it ensures that we are always kept updated on trade related developments and enables us to participate actively in such developments.

### ACCREDITATIONS

Baltic Control® is accredited by the Danish Accreditation and Metrology Fund (DANAK) as both an inspection and a certification body. This ensures that Baltic Control® is meeting international standards and that we are competent to carry out our services according to international standards. Apart from the DANAK accreditations, we are accredited by various other bodies listed on our website [www.balticcontrol.com](http://www.balticcontrol.com).
